Purification LLC Partners with GoldenSea UV on Advanced UVC Technology for Indoor Air Sanitation

F300 Device Uses Carbon Filters and UVC Lights to Eradicate COVID-19 Causing Pathogens

TEMPE – [Purification LLC](#) has partnered with Germany-based GoldenSea UV on a new sanitizing technology that uses a collection of carbon filters and UVC light to eliminate harmful airborne pathogens. The portable technology can be used in restaurants, stores, offices and other buildings to allow safer gatherings amidst the pandemic.

“This is a revolutionary tool for making any space safe from disease quickly and effectively works by eradicating the pathogens that cause illnesses such as the flu and COVID-19,” said leading UVC light expert and Purification LLC Founder, Nicholas Knudsen. “We are excited to be partnering with GoldenSea UVC on this forward-thinking technology that we are confident will help create a safer, more comfortable environment during the pandemic and any future health threats.”

The F300 device, also known as Tube, can sanitize a 400 square-foot space with a 10-foot ceiling in just 30 seconds, making it one of the most efficient modes of sanitation yet.

GoldenSea UV, which has a long history of manufacturing lighting equipment, much of which was used for music tours that have since been canceled, quickly pivoted its business amidst the pandemic to create this powerful sanitation technology.

“We’ve now just received the results from our first independent lab tested air purification product, certifying a kill rate of the MS2 test virus, which was used as a test substitute for Sars-CoV-2, at Log 4, or 99.991%,” said Jerad Garza of GoldenSea UV. “Good things are happening, and we are proud to welcome Purification and Nicholas Knudsen as our partner. His experience and expertise in the application of UVC in the field is second to none.”
